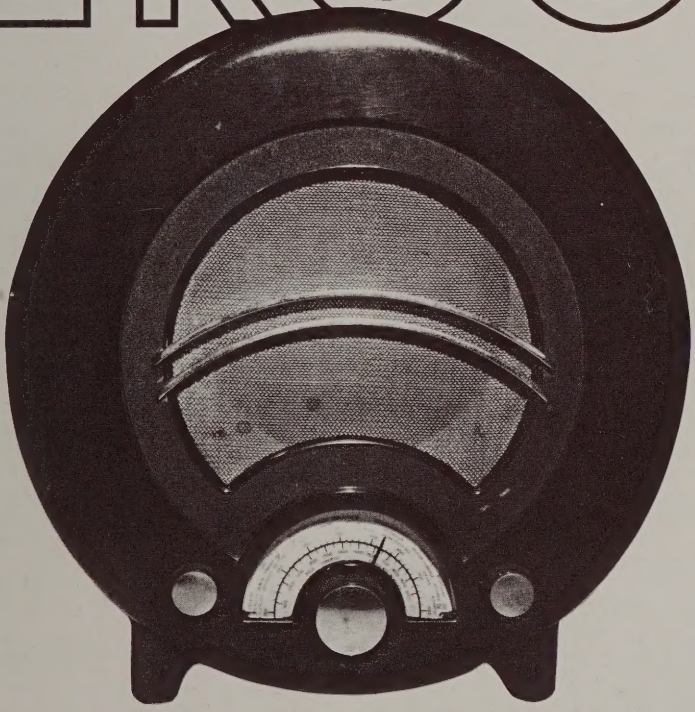
ANTIQUE RADIO CLASSIFIED

VOLUME 7 MARCH 1990 NUMBER 3

EKCO



The Round Radios

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS
OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

ANTIQUE RADIO CLASSIFIED

Antique Radio Classified (ISSN:8750-7471) is published monthly, 12 times per year, by John V. Terrey, 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. Telephone: (508) 371-0512; 9:00 AM to 5:00 PM ET; machine answers phone at other times.

Annual subscription rates within the U.S. are $20.00 by Second Class mail and $30.00 by First Class mail.

Annual foreign rates. By air: Canada - $32.00; Mexico - $30.00; Other foreign countries - $60.00. Surface mail: Canada - $27.00; Other foreign countries - $30.00 (Surface delivery to countries other than Canada may take two or more months and cannot be guaranteed.)

Two-year subscriptions are twice these rates and receive an extra month. Sample issues are available free on request.

PURPOSE. ***Antique Radio Classified*** is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

WRITING TO ANTIQUE RADIO CLASSIFIED. All correspondence should be sent to:

Antique Radio Classified
P.O. Box 2, Carlisle, MA 01741.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if (1) each is on a separate piece of paper, and (2) your name, address and SUB# is written on each.

Unfortunately, A.R.C. is not staffed to answer letters with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest to its readers and will publish them as space permits. A.R.C. assumes that permission is given to edit and to publish all correspondence received unless otherwise indicated.

GUARANTEE. You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

PAYMENT. Please send in full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds; checks drawn on a U.S. bank or money orders are preferred. Make check out to "A.R.C." U.S. stamps or cash are OK for small amounts. Canadian payers may send a Canadian check in U.S. funds, but please add $1.00 (U.S.) for conversion costs. On request, subscriptions will be prorated to amount sent, minimum term is one year.

CHANGE OF ADDRESS. Please notify us 4 weeks in advance of a change of address. Send both your new and old address, and include your SUB# and effective date of your new address. Temporary address changes can be made also.

SUBMISSION OF MATERIAL. ***Antique Radio Classified*** welcomes and solicits information that pertains or relates to radio history or collecting. This may include articles, book reviews, photos, information on upcoming radio events, meetings, antique radio organizations, radio auctions and price reports, sources of old radio and restoration supplies, and other related and interesting material. All material submitted should be neat and verified for accuracy. Unless prior arrangements are made, all submitted materials may be edited, become the property of ***Antique Radio Classified*** and will not be returned.

MAILING OF ISSUES. A.R.C. is available by subscription in the U.S. either by First or Second Class mail (Second Class is the way most magazines are mailed). First Class copies usually are received by the fifth of the month; copies by Second Class mail, by the tenth. The mailing of First Class copies is staggered, with those living farthest away mailed on the first day, and local copies mailed the last day. All non-U.S. copies are mailed on the first day. All Second Class copies are mailed on the last day. Mailing is usually completed by the 25th of the month.

ETHICS. No person involved in the production of A.R.C. is to act on any information in the magazine until they receive their copy through the mail.

DISCLAIMER. The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

Antique Radio Classified subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.

DISPLAY AND BUSINESS CARD ADS – DETAILS AND RATES

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be so identified. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

The deadline for display and business card ad artwork, payment and repeat requests is the first of the month. All advertising must be prepaid; see "Payment" paragraph above. Late ads will be run only if space and time permits. As artwork is reduced to 63% in the printing process, **originals should be the artwork size listed below.** Do not send in artwork on art board or send negatives. Ads should be typeset or typed neatly with a carbon ribbon. If you want us to prepare your ad, include the one-time cost listed below for A.R.C. to make up the ad.

"Tear sheets" will be sent only for 1/2 and full page ads, if requested when ad is submitted.

Business card ads are limited to one per advertiser.

Photos should be at an 85 line screen; otherwise, add $8.00 per photo for screening. (Do not glue photos to artwork; submit separately.) If you are confused by these requirements and terms, please write or call A.R.C. before beginning to prepare your ad.

We will be happy to advise you on your ad ideas, estimate how much the ad will cost, recommend an ad size, etc.

We assume that advertisers want all ads which are submitted to run without delay; therefore, we will run the ad and bill for any additional work required for the ad to meet these specifications. A late ad will be run beginning with the next month.

The 3-month rates represent about a 10% discount, the 6-month rates, 20%. Clubs, write for discount rates.

Page	Artwork Size (send in this size) H x W (inches)	As Printed (size in magazine) H x W (inches)	Cost for 1-month	Cost for 3-months	Cost for 6-months	One-time Cost for A.R.C. to make up Ad (if requested)

EDITOR'S COMMENTS

Yes, another fat A.R.C. Instead of fourteen pages of index, this month's bulk consists of over 525 classified ads – a new peak – and seventeen article pages. The 5500+ subscribers buying and selling through these pages continue to push A.R.C. to new heights. A.R.C. is where radio collectors advertise; no other monthly antique radio publication has even one-fourth A.R.C.'s readership.

In this issue...

Howard Stone returns with another article on radios from Great Britain, this time on the round Bakelite Ekco receivers appearing from 1935 to 1945. (Howard wrote the five-part *Collecting British Crystal Sets* series which began in A.R.C. in January of 1987.) The Ekco Model AD 36 appears on our cover this month. A note and a photo from Klaus Beckmann complements the British "round ones" with an American "round one" from Stewart-Warner.

A significant article on the RCA Radiola Grand comes from William Boyd. Not only are details of his restoration process included, but the operating results of both his Grand and Henry Rogers' are tabulated. William and Henry logged forty different stations on their Radiola Grands!

We have two *Museum Musings* this month. The first reports on the tragic situation with the Foothill Electronics Museum in the San Francisco area; it has been ordered to vacate the building housing its collection. Next is a follow-up on the upcoming television exhibit at the New Museum of Contemporary Art in New York City. One of the items sought – a DuMont Duoscope – is pictured and described.

Richard Foster in *Restoration Topics* lists nineteen pitfalls to avoid when restoring old radios. This is only a start; we have others from Richard and invite readers to send in their favorites too. Two general auctions including radios are reported by Ray Chase and John Hayes. A butterscotch Fada Catalin at over $450 brought the highest bid.

The *Club Spotlight* features the New England Antique Radio Club which has grown to over 300 members in about a year and a half. Items in the *Photo Review* range from crystal sets and novelties to U.S. and German superhets.

Several reader letters are included this month. Two address the isolation transformer issue. We have another California earthquake report, and a question about my January 1990 "Editor's Comments" on preserving the recollections of early pioneers. Which brings us to an excellent example of such preservation ...

Thorn Mayes' Book. I just received a copy of *Wireless Communication in the United States* by the late Thorn Mayes, published by the New England Wireless and Steam Museum. Thorn was a teenager during the spark days and a General Electric engineer until he retired. The museum has put together a comprehensive history from Thorn's papers written over some thirty years, along with photos and other information. We hope to have a review of this fine book soon. (It is advertised on page 59.)

A.R.C. Index Coming. Soon, an index covering A.R.C. from June 1984 to December 1989 will be available. Frank White has compiled this index, and hopefully we will have it printed soon. It includes over 3500 entries covering 65 issues of A.R.C.

Names and addresses now required. Please note a new stated policy for classified ads. A last name (or business name) and address will now be required in all classified ads. This is not a change for most of you who have been including it. Actually, this formalizes a procedure whereby we have added most names and/or addresses when they were missing. From now on, this is a policy. This should help communication, especially when a problem in buying or selling between readers occurs.

Complete List of Radio Clubs. The "Radio Club Listings" this month include **all** of the U.S. clubs that have provided us with information. If your club is not listed, please send us information so we can list it; if you are listed and there is an error, let us know and we will correct it.

The *Coming Radio Events* section hints at a very active month of March – over a dozen old radio gatherings. Also, note the dates in "Mark Your Calendar" for the upcoming large multi-day meets. It is not too soon to make your plans and lodging reservations for these popular events.

Happy collecting,

John V. Terrey

ON THE COVER

The cover photo is the Ekco Model AD 36, a 4-tube British TRF AC/DC set manufactured in 1935. Howard Stone has contributed an article on these Bakelite "round ones" from Ekco, and has illustrated it with photos furnished by Jonathan Hill from his book *Radio! Radio!*. The standard cabinet color for this set was brown Bakelite, but black with chrome detailing and nonstandard colors could be special ordered.

Radio! Radio!, a 242-page book with over 900 figures of British sets, is available from Howard Stone, 2825 6th Ave., Fort Worth, TX 76110, and from Antique Electronic Supply and Vestal Press.

WITH THE COLLECTORS

Ekco Receivers

The Round Radios

BY HOWARD STONE

When one thinks of a Bakelite radio in Britain, the round Ekcos come to mind. While they are the most popular of Bakelite sets and perhaps of all mains (AC) sets in that country, Ekcos are also desirable for collectors in the United States.

In 1932, the architect Wells Coates won the competition sponsored by E. K. Cole Ltd. (hence the name Ekco) for a new radio cabinet design using Bakelite as the material. In 1934, the winning entry was manufactured as Model AD 65, shown in Figure 1. It was the first of five models of Coates' design that would be released between 1934 and 1945.

The AD 65 was the first round Ekco. The black version, sold for £11.11s.0d. (approx. $58 U.S.). This four-tube superhet could work AC or DC and covered the broadcast band and long wave.

In 1935, two additional round Ekcos were introduced: the AD 36, shown in Figure 2 and on our cover, and the AD 76 in Figure 3. The AD 36 was a four-tube TRF set that worked on AC or DC, and also covered the long wave and broadcast bands. The walnut version cost £8.8s.0d. (approx. $40 U.S.). The AD 76, a five-tube superheterodyne set operating on AC or DC, covered the broadcast and long wave bands. The black with chrome version sold for £12.1s.6d. (approx. $60 U.S.) with an AC-only version selling for £11.11s.0d. (approx. $58 U.S.).

In 1940, the AD 75, shown in Figure 4, was released. A four-tube AC/DC superhet, it covered the long wave and broadcast bands. Because of the wartime economy, the set sold for only £7.7s.0d. (approx. $30 U.S.). After the war in 1946, it was released with slight modifications and an increased price tag.

The last round Ekco, the A22 shown in Figure 5, was marketed in 1945. This four-tube superhet operated from AC only. Like the others it had both long wave and broadcast bands, with the addition of a shortwave band. It cost £14.14s.0d. plus £3.3s.3d. purchase tax, (approx. $71 U.S.).

Figure 1. The black version of Model AD 65.

Most round Ekcos that are to be found now are walnut colored or black, but several other colors were available for the consumer willing to wait for the special order to be filled by the factory. Such non-standard colors are rather rare, and some of the existing colored Ekcos have actually been painted.

If you find a round Ekco, look it over carefully. Since it is such a prized set to collectors, with widely recognized value, some of them have been restored poorly or not to original condition. Use some resource to help you identify originality of the radio and its parts. A good reference book is Jonathan Hill's *Radio! Radio!*, which is full of pictures and useful background information on British radios.

Now for a strange confession: When I first wrote this article I did not own a round Ekco. I had seen a number of them in collections. The ones I saw were either not for sale or not restored to original condition. I did not have the advantage of

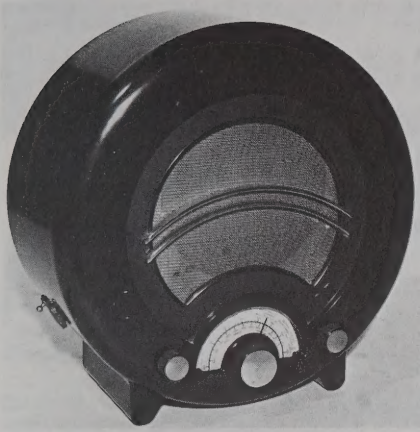

Figure 2. 1935 AD 36.

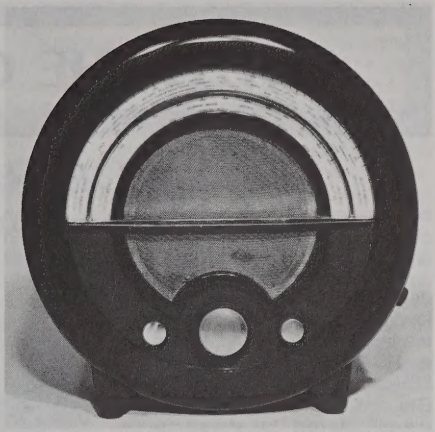

Figure 3. 1935 AD 76.

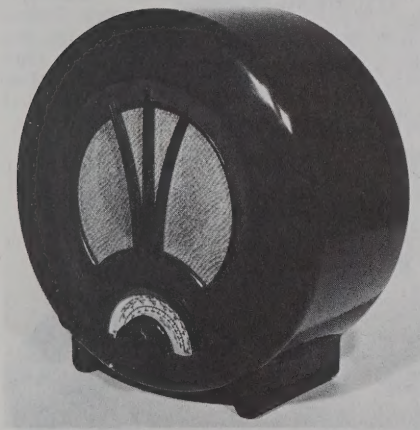

Figure 4. 1940 AD 75.

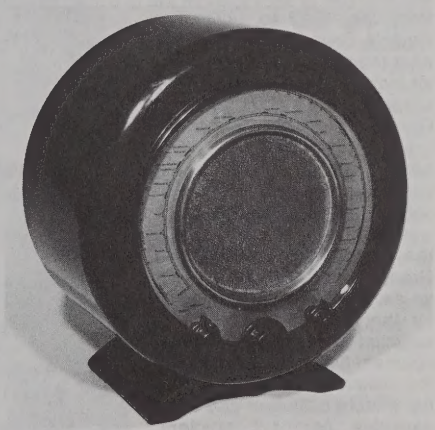

Figure 5. 1945 A22.

living in Britain full-time, where one has a chance to find one in the neighbor's attic or Aunt Bessie's cellar. Just before I prepared the last rewrite of this article, I was able to secure a nice black and chrome AD 76. I hope you will be fortunate enough to find a round Ekco too.

(Howard Stone, 2825 6th Ave., Fort Worth, TX 76110)

Stewart-Warner's Round One

BY KLAUS BECKMANN

America's entry into the "round radio" market was by the Stewart-Warner Corporation of Chicago, Illinois. Introduced in 1936 as the "Good Companion," this Model R-192 compact four-tube mantle set was offered in several finishes – all-chrome with silver grille, antique copper, and black leatherette with chrome facing. The base is of painted wood, about thirteen inches long. The tilt angle is adjustable as well. Unfortunately, this set does not have the original knobs. *(Klaus Beckmann – General Delivery, Tofield, Alberta, Canada T0B 4J0)*

WITH THE COLLECTORS

The RCA Radiola Grand

BY WILLIAM M. BOYD

"The finest principles of radio detection, amplification, and loud speaking are embodied in the new Radiola Grand" states an RCA ad from *Radio News*, March 1923. The Radiola Grand, shown in Figure 1, was manufactured by Westinghouse Electric Manufacturing Co. for RCA of Camden, N. J., from Jan. 1923 to 1924. The Radiola Grand was introduced after the production of the similar-looking Aeriola Grand was stopped. The rare Aeriola Grand, which used four triode tubes and four WB-800 ballast tubes, apparently was not a successful receiver due to unsatisfactory performance, and it was ultimately withdrawn from the market. The Radiola Grand's circuitry, however, was an excellent performing design for that early period. The instruction manual says, "The instrument has been designed by the makers to give a strong signal without distortion and to be sensitive, compact, efficient, free from disagreeable tube noises, and simple to operate."

Figure 1. The Radiola Grand shown with the cover open.

CIRCUIT DESCRIPTION

The Grand employed a regenerative circuit consisting of a transformer-coupled detector, first audio and output push-pull stages employing four WD-11 Style No. 319533 Radiotron tubes. The Grand represented a new design for this time period as it included a self-contained loudspeaker. The manual suggests that if weak signals are to be received, one may use a headset plugged into the jack on the left-hand-side of the cabinet. The controls, shown in Figure 2, included a filament rheostat, volume, tuner, tuner vernier, and tickler. This circuitry was accessible by lifting up the veneered control panel. The B batteries were installed in the lower compartment of the set with the C batteries mounted in a clip on the under side of the panel. The heavier A batteries were external to the set, and consisted of separate dry cell batteries to feed each tube – the connections made by feed-through terminals at the cabinet back. A heavy cast horn speaker (Westinghouse Type FL) was mounted inside the cabinet (see Figure 3). The receiver housing as described in the manual "consists of a well-finished mahogany cabinet..." A suitable stand, with storage space for the A batteries, was available for the Grand if desired. Figure 4 shows the Radiola Grand on its stand as advertised in *The Literary Digest* for September 8, 1923.

The plate voltage for the detector is +22v with

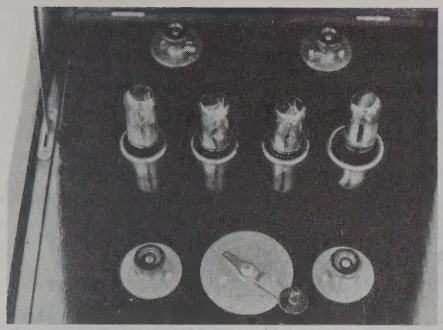

Figure 2. The Radiola Grand instrument panel showing the controls and four Type 864 tubes.

the audio plate voltages operating at +90v. The audio tubes are biased at -3v. Filament voltages for the WD-11 tubes are typically set at 1.1v (maximum). The serial number of my Grand – which is stamped under the panel at the left rear area as well as handwritten inside the case with chalk – is F105. The metal nameplate on the back indicated Style 365102, Type RG, Serial #146890.

RESTORATION

I purchased this hard-to-find set from a collector friend in Maryland in May 1989. The case, finish, and chassis were in good condition but required a fair amount of cleaning. The panel and chassis were complete except for the B battery capacitor, wooden battery compartment, bias battery contacts, and a battery terminal nut. Electrically, the output audio transformer had an open primary winding, and the filament rheostat had been rewound. The detector and first audio transformers were good but not original; the windings were enclosed unlike the open type originals. It was interesting to note that these audios were apparently installed many years ago and, in fact, appeared to be factory installed.

During the next few months I had the output transformer rewound, changed the rheostat to the required four ohms, and purchased some WD-11 and 864 (VT-24) tubes. [The 864 (VT-24) or 215-A (VT-5) tubes in socket adapters, may be used in place of the more difficult to find WD-11]. The insulated wiring in the set was very brittle from age and required a combination of repair and taping to correct. The uninsulated nickle-plated wiring was soldered in very neatly (with straight runs); appearance apparently was important (see Figure 5). The silver-plated screws and terminals were cleaned with a silver cleaner. The front panel grille had been poorly stained (apparently a factory job) and did not have the quality appearance of the cabinet. I therefore restained the wood and also added a gold grille cloth behind the panel to match the gold color of the controls.

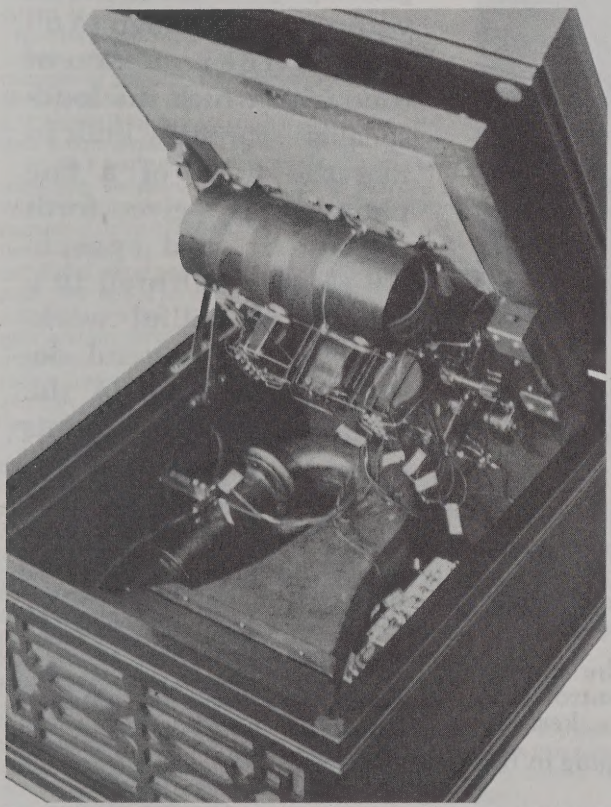

Figure 3. The panel of the Radiola Grand raised to show the chassis and cast metal Type FL horn.

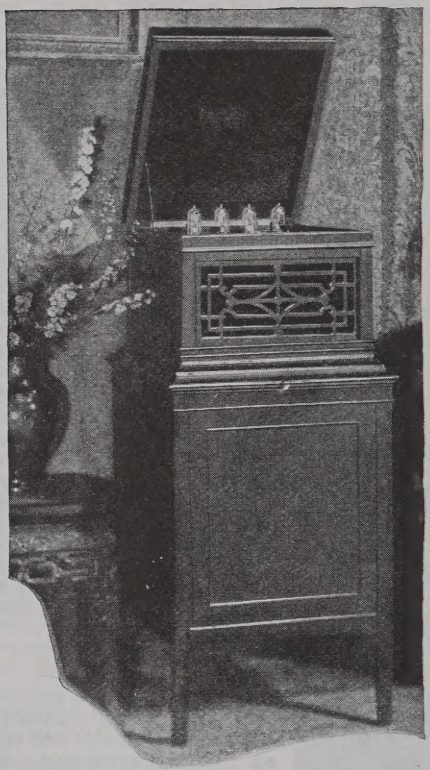
CIRCUIT CHECKOUT

The main problem encountered when I first started to check out the receiver was that no complete schematic was available showing individual component values. I could locate no information to check for correct transformer (DC resistance) measurements, RF capacitor values, resistor values, etc. I completed measurements on my set and contacted a number of collectors regarding schematic values and other information. Henry Rogers was very helpful, providing me with measurements on his Radiola Grand (SN 0427) which was also a working unit. Refer to the chart in Figure 6, which lists measured component values from our two Grands. This chart, along with the schematic, Figure 7, should be helpful to anyone attempting to determine typical Radiola

(Continued on following page)

Radiola Grand



Radiola Grand and mahogany finished stand with "B" batteries and 4 Radiotron WC-11 dry-cell vacuum tubes, $350.00.

WITH the Radiola Grand, radio takes on new meaning. The simplicity of tuning in—just a knob or two to turn. The big distances it covers—picking up far-away stations with volume enough to fill a room. The perfection of tone with which the loudspeaker—carefully built in like the horn of a fine phonograph—gives forth the music and speech. All this—combined in a cabinet of skillful workmanship and tasteful design—places radio in the home where beauty counts—and performance.

Points to Note:

All the batteries—dry cells—are hidden away inside.

You can regulate the volume of sound by a control that governs the loudspeaker.

For long distance, plug in the headphones. Coast to coast reception is no unusual record for Radiola Grand!

Famous for *true* reception, undistorted. For keen sensitivity. And for beauty.

Figure 4. Advertisement of the Radiola Grand as it appeared in the September 8, 1923, issue of "The Literary Digest". (From the collection of Dave Crocker)

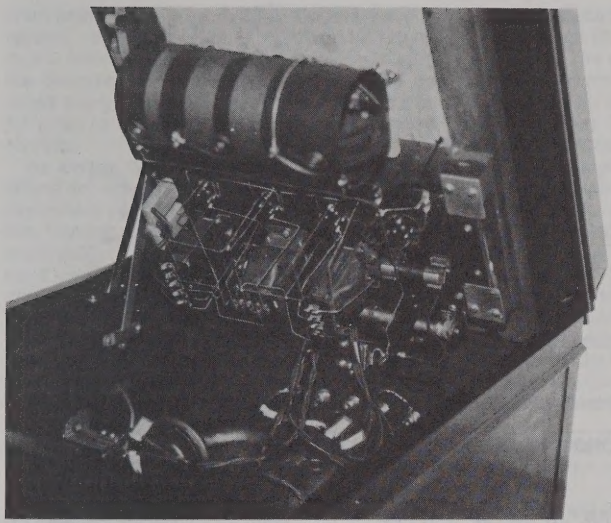


Figure 5. The circuitry and wiring of the Radiola Grand mounted under the panel.

(Radiola Grand, continued)

Grand or similar Radiola design circuit values. This data is somewhat different between the two Grands presumably due to design variations/ changes or perhaps due to changes over time. Refer to Note 1 in Figure 6, to show which transformer data is taken from original units and which data is from replacement transformers.

When I first turned on the set, I found, as expected, variations in performance with the WD-11 and the 864 tubes. I ended up using the 864's (with adapters) due to somewhat better performance. The 864 is an ideal substitute for the lower gain and sometimes microphonic WD-11. Both tubes operate at 1.1v @0.25A. The amplification factor for the 864 is 8.2 compared to 6.6 for the WD-11 as noted in the *1937 Radio Data Handbook*. The receiver initially sounded distorted which was attributed to poor grounding and operating the detector at +45v. H. Rogers pointed out that the detector tube should be operated at +22v to avoid clipping and resulting distortion. I also noted in the Grand's manual that the detector should operate at +22v and not +45v as the schematics show. The enclosed schematic was modified by me to reflect the manual's recommended connections; the B- and (+A1, Gnd) should be connected together, and +22v should be used for the detector.

Distortion was also present in the horn speaker due to the diaphragm in the drive unit requiring adjustment. The diaphragm was centered by carefully inserting thin rubber washers to set the correct spacing.

GRAND PERFORMANCE

The Grand worked great after the above changes were incorporated! I used a metal window frame for an antenna, and the ground was the house ground. The set initially tuned slightly low from about 500-860 kHz (long wave) and about 720-1350 kHz (shortwave). The manual indicated the unit should operate over 566 kHz to 1667 kHz. I decided to make a minor addition and added a Hi-Q 3 mhy coil across the tuner coil to push the overall tuning range higher in frequency. This resulted in a final tuning range of 550-900 kHz (long wave) and 850-1410 kHz (shortwave). Refer to the chart in Figure 8 for a list of 31 stations I received and for the corresponding tuner and tickler settings. These many Northeast Coast stations were received during the day; nighttime receiving was not possible in my area of New Jersey due to evening line interference. The

Figure 8. Operating results by William Boyd and Henry Rogers on their Radiola Grand receivers.

chart also shows a list of strong signal stations recently received by Henry Rogers on his Grand over a half-hour time period. Henry noted during the operation of his set that stations could be tuned every 10 kHz! Stations were received as far away as Canada and Nebraska; he lives in Nevada.

As always, the tuner and tickler settings of the Grand (or any similar receiver design) is very dependent upon the particular tube characteristics, filament voltage, circuit tolerances, and most importantly the antenna and ground system used. I found, for example, the 864's operated at about half the tickler setting when compared to the WD-11's due to gain differences. The volume level was more than sufficient for most stations and loud for many. The horn speaker sounds very nice. As noted in the schematic, volume is controlled by simply switching in a shunt resistance across the first audio stage. The manual points out that the receiver will work with only three tubes (if one tube fails) – by rearranging the remaining tubes leaving only one tube in the push-pull stage. When I tried this, the volume dropped only slightly.

Overall, the Radiola Grand performs very nicely considering it was designed in 1922; its regenerative circuit is highly sensitive as well as selective. The mahogany cabinet exhibits the well known craftsmanship by Westinghouse (RCA) and presents a quality appearance.

In summary, the Grand can best be described by an advertisement from *The Saturday Evening Post* on December 22, 1923. It reads:

"With the Radiola Grand, radio takes on new meaning. The simplicity of tuning in – just a knob or two to turn. The big distances it covers – picking up far away stations with volume enough to fill a room. The perfection of tone with which the loudspeaker – carefully built in like the horn of a fine phonograph – gives forth the music and speech. All this – combined in a cabinet of skillful workmanship and tasteful design – places radio in the home where beauty counts – and performance."

Special thanks to Henry Rogers for information and measurements taken on his Radiola Grand. Thanks also to Ray Thompson and Tod Prowell for the Radiola manuals and material and to Alan Douglas for *The Saturday Evening Post* advertisements.

LETTERS – ISOLATION TRANSFORMERS

Dear Editor,

In a previous issue, you had an article expressing the importance of using an isolation transformer when attempting to repair old radios. However, you failed to mention what specifications should be considered when purchasing such a transformer and the approximate price of these units. Please address these concerns in an upcoming issue.

Thank you, Richard Bell, Kirkland, Wa.

The use of an isolation transformer, especially with AC/DC sets, was emphasized in: "All You Need To Know About Repairing AC Radios," Part 2 (April 1988) and Part 7 (June 1989). Because one side of the line cord in an AC/DC set is usually connected to the chassis, an extreme shock hazard exists; the use of an isolation transformer is the ONLY way to reduce this shock hazard!

Isolation transformers are rated in "VA" or volt-amps; the volt-amp value of the transformer used should be greater than the watt draw of the radio being tested.

A 35 VA isolation transformer is available from Antique Electronic Supply (688 W. First St., Tempe, AZ 85281, tele: 602-894-9503) for $12.59. This transformer has pigtail leads.

Isolation transformers also are available from "You-do-it" Electronics Center, 40 Franklin St., Needham, MA 02194, tele: 617-449-1005). They have a 100 VA model which includes line cord and 110v plug for $37.80 and other models from 15VA to 1500 VA ranging in price from $13 to $180.

Check with the supplier as shipping and/or minimum order amounts may apply. Also, please mention "Antique Radio Classified" if you contact these suppliers for transformers.

In the January 1989 issue of A.R.C., Orval Parker reported on an adjustable isolation transformer constructed from a dual-primary (two 110v windings so that it could be used at 220v) filament transformer found in the surplus electronics catalogs. The output voltage could be increased or decreased by the amount of the filament, or lower voltage, winding.

A letter with another suggestion follows.

(Editor)

Dear Editor,

Why all the fuss about an isolation transformer. Fair Radio Sales Co., P.O. Box 1105, Lime, OH 45802 sells a transformer for $9.95 that is rated as follows: 2/55VCT, 4 amp.,440 VA, measures 4.5" x 4.5" x 4" and weighs 10 lbs. Catalog number is 701-205. If the two secondaries are connected in series, the output voltage is 110v at around 400 to 500 watts.

Yours truly, John Nosbaum, Wilmette, Ill.

MUSEUM MUSINGS

Foothill Museum Ordered to Close

BY MIKE ADAMS

It was a dark day in Northern California radio history. On Monday, January 22, 1990, the Foothill Electronics Museum on the San Francisco Peninsula was ordered closed by the Foothill Community College Board of Trustees. In operation since 1965, the museum has displayed the internationally-respected Douglas Perham collection including early broadcast station KQW and the papers of Dr. Lee de Forest. As a response, the trustees of the museum's contents, the Perham Foundation, filed a complaint to prevent closure in the nearby Palo Alto division of the Santa Clara County Superior Court.

How could this happen? How, in Silicon Valley – home of de Forest, Shockley and Farnsworth – could a museum be prevented from sharing its rich, local electronics history with the several million citizens of the San Francisco Bay Area? Why would this venerable institution that has for decades been the center of activity for dozens of amateur radio organizations and the permanent home of the California Historical Radio Society (CHRS) be told to pack its bags and go away? And most important, how could a building that was sponsored and paid for by private donations be "taken over" by a college? These are the questions that our shocked and disbelieving community is asking the courts to answer.

Try to understand the long and complex relationship between the Foothill Community College District and the Perham Foundation. In 1964, the Foundation raised $180,000 from the likes of Ampex, Hewlett-Packard, Varian and others. As a result of this success, matching federal funds were obtained, and a museum was constructed by the College on its campus. In the original contract, Foothill agreed to house a permanent museum for 99 years, and we, the Foundation, agreed to administer its contents in perpetuity. All went well until 1978 when Proposition 13 severely limited the amount of property tax collection; the college laid off all museum employees, and we took over the operation of the facility using volunteer docents from the community. While financial exigencies forced us to modify the original agreement, it was still our collection in our building...or so we thought.

More changes. The California community college student is about 30 years old, works all day and attends night classes. Foothill College, unable to construct more buildings, wanted the museum building for a classroom. You see, more students mean more state money, and this has become the main issue. To the college, it was simple: "return the building to instructional use..." Did the college say that? It did, but nothing could be further from the truth. First, the museum has never been a classroom; if you've ever seen it, (see Figures 1 and 2), you realize that it could only be a museum. Second, even though it's on college property, money for its construction was donated by private industry specifically to build a public museum to permanently house the Perham collection.

Now the lawsuit. On one side, the Foothill Community College District, and on the other, the non-profit Perham Foundation, both educational entities. Because the college will not be satisfied until it gains control of the building and because we of the Foundation have a public trust to display the Perham archives and artifacts, we got a good lawyer. Bart Lee, an attorney and fellow radio collector, has donated his time to the museum board during the long process of crafting a complaint. Basically, we are saying the construc-

Figure 1. Interior view of the Foothill Electronics Museum. Notice the unusual curved display areas which are open to the floors above.

Figure 2. One of the many static displays of early electronic items inside the Foothill Electronics Museum.

tion of the museum that houses our important collection of historic radio stuff was only made possible because in soliciting funds for its construction, we agreed that it would be permanent. Closure of the museum would be a breach of our public trust.

There are several likely outcomes of this suit, some probable, others remotely possible. Perham will likely get back all the museum and library contents. This was stated in the resolution by College President Tom Clements: "offer the artifacts and archives to the Foundation..." Another possibility is that we will have to move out but get our original 1964 donated construction funds back in 1990 dollars. In our suit we are asking for 1.5 million dollars, but whether a judge would force a public college to pay this amount is open to speculation. A less likely possibility is that the court will force the college to revert to its original contract and allow the museum to remain at Foothill. We are asking for some combination of these options.

So maybe the courts will stop the closure of the museum. At least we can delay it, but since the college owns the land, we eventually may have to relocate. But can we afford to move? This is one of the richest areas in the world, ten minutes from Stanford University, surrounded by educated and affluent people, most of whom owe their good fortunes to the radio pioneers of yesterday. The real irony is that what made Silicon Valley successful, electronics, has made it too costly for a museum of its history to exist. We of the Perham Foundation believe that closure of the museum is a bad precedent to set for the future of historical documentation and the wrong message to present to our young people. This important resource, this major collection of antique radio devices on the West Coast, must survive.

If you would like to donate money to the "museum fund for justice," contact Foundation President Don Koijane at (415) 941-0247 or write to the Perham Foundation, 101 1st St., Suite 394, Los Altos, CA 94022.

(Mike Adams, 112 Crescent Ct., Scotts Valley, CA 95066. Mike Adams is a member of the board of the Perham Foundation).

The Big One – Another Report

BY JOHN FIELD

In the January issue of A.R.C., we published the experiences of California radio collectors from the earthquake of October 17, 1989. Here, John Field relates how his collections faired even when prepared for such a disaster.

Except for a damaged chimney, my home and shop buildings in Santa Cruz, California, survived the October 17, 1989, earthquake fairly well. My collectibles are, for the most part, stored on shelves. Surprisingly, many casually placed items, such as stacks of 78 rpm records on top of consoles, stayed put. My basic shelves did fine, for they have always been earthquake prepared by having braces across from each one.

When the tremor hit, most items stayed on the shelves. Most of what did fall did not break, such as a collection of old hi-fi equipment shown in Figure 1. This fell because one of the earthquake shelf braces broke. Unfortunately, a mint condition 1920's radio had its Bakelite panel shattered.

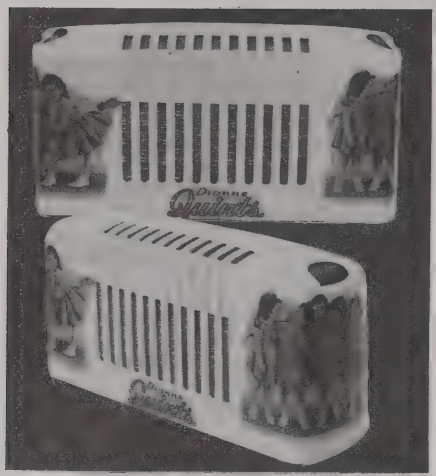
My collection of old electric trains on tracks was on shelves with lucite edges. Some trains fell off their tracks, but none fell to the floor.

(John Field, 117 Arroyo Pl., Santa Cruz, CA 95060)

Figure 1. A pile of old hi-fi equipment shaken from shelves because of a broken brace.

PHOTO REVIEW

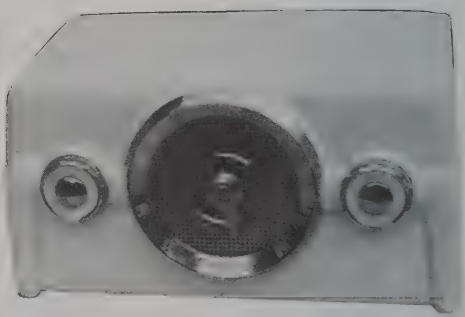
This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other radio-related items (covering the years 1900-1950's) from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short description must be included with each submitted item. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.



NOVELTY RADIO - The Model R447 radio was produced by the Stewart-Warner-Alemite Corp. of Belleville, Ontario, Canada, about 1939. Decal pictures of the famous Dionne Quintuplets are featured on both ends of the molded case. *(George Found - Kitchener, Ontario, Canada)*

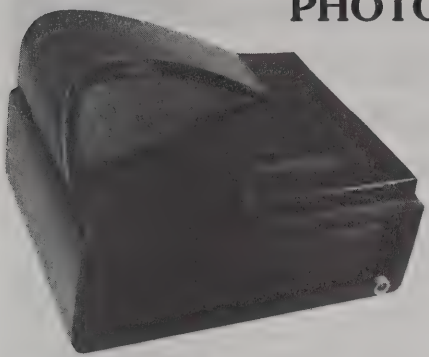
CONE SPEAKER - The label on the bottom of the base identifies it as a Tower Scientific cone speaker manufactured by the Tower Manufacturing Corp. of Boston, Mass. The semi-rigid cone is mounted only at the center with the edges entirely free. It is sixteen inches high. *(Walter V. Worth - Wollaston, MA)*

ROCKET RADIOS - These Germanium radios were made by various Japanese companies in the late 1950s. The tuning is similar in all three, consisting of a small metal stick at the top of the rockets. Each is equipped with a small headphone plug inserted into the ear. *(Erwin Macho - Vienna, Austria)*

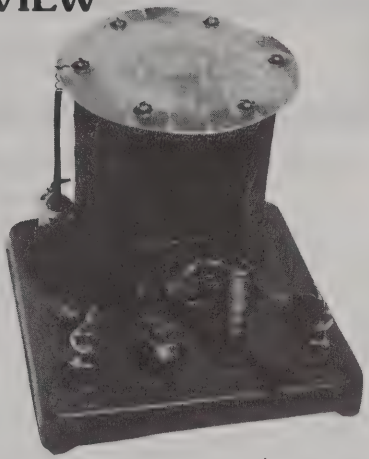


CROSLEY MODEL 10-135 - This radio is typical of the plastic style of radios of the early 50s. This one has a white plastic cabinet with gold and chrome trim grille. The last three digits of the model numbers indicated the cabinet colors. *(Dave Crocker - Lyndonville, VT)*

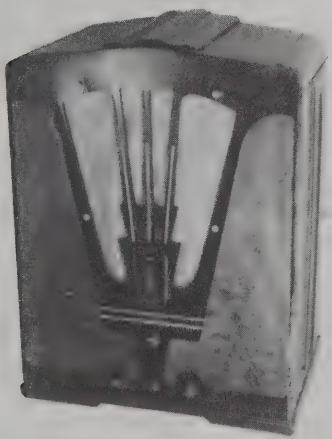
PHOTO REVIEW



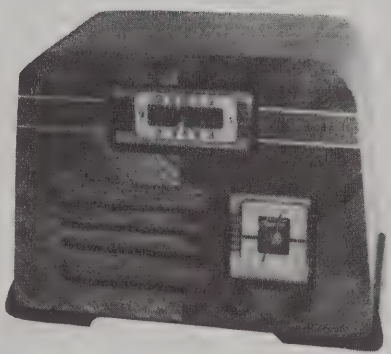
1949 PHILCO - The five-tube Model 49-1401 was one of the last of the radical radio/phonograph designs. Just open the front door, slide in the record, close the door, and the music poured forth. It featured an automatic shut-off at the end of the record play. *(Fred Geer - Jacksonville, FL)*



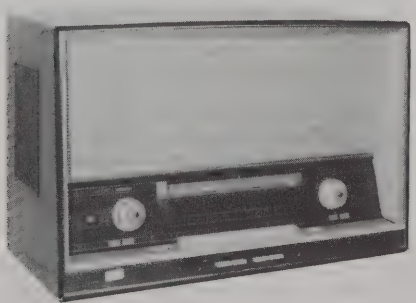
MARTIANS IN EUROPE - This Type "Special" crystal set was manufactured by the Martian Mfg. Co. of Newark, New Jersey. It was exported and sold in Austria in 1925 by Wireless Radio Ges.m.b.H. *(Erwin Macho - Vienna, Austria)*



PHILCO SUPERHET - This Model 16B was produced in 1933, and was an eleven-tube giant in an Art Deco cabinet. It was the first to use a tone compensating loudness control which boosted the bass at low volume settings. *(Fred Geer - Jacksonville, FL)*



PHILCO SUPERHET - The Model PT69 was one of the first clock radios to be offered in a small table model version. The wood veneer cabinet is of a Deco style and was offered in 1939. *(Fred Geer - Jacksonville, FL)*



GERMAN-MADE SABA AUTOMATIC 125 STEREO - This is the largest and heaviest table set I own! It is 28 inches wide and weighs 102 pounds. This radio utilizes a scanning-type motorized tuning, with a built-in rotary antenna. There are five speakers in all, including: (2) 12-inch woofers, (2) 7x9-inch mid-ranges, and a 4x6-inch tweeter. Thirteen tubes are needed to power all this, but it only has four bands. This was probably the last gasp of the tubed radios in Germany. *(Walter Worth - Wollaston, MA.)*

AUCTION REPORT

Liberty Antique Warehouse General Auction

Parksville, New York – January 1, 1990

CONTRIBUTED BY RAY CHASE

A general auction at Liberty Antique Warehouse, Parksville, New York, on January 1, 1990, included about seventeen radio items. Ken Saltzman, phone (914) 292-7450, was the auctioneer.

Zenith console, 3 concentric knobs and push buttons, BC, SW, and old FM band (model number not avail.), cabinet very good, some rust on chassis and spekaer, dial belts all rotted, smaller black dial series.....$45
Philco 46-1209 console with fold-out front record changer, 4 knobs and push buttons, loctal and octal tubes, cabinet fair to good.....10
Philco 38-3 slope-front large console, 5 knobs and telephone style station selector, Deco style, cabinet and chassis very clean 45
Philco small console 48-1262 with fold-out front record changer, no SW band, cabinet fair, speaker not bolted in 10
Silvertone small console 4548 farm radio with vibrator power supply for 6-volt storage battery use, 4 knobs & airplane dial, cabinet and chassis very clean 45
Philco chairside or end table radio, walnut & very nice shape, uses a car radio chassis (1942 vintage ?) 70
WE 10D horn speaker, good condition 45
Browning Drake 4-tube model in superb ornate burled walnut table cabinet, built-in American Electric driver & folded horn, missing one section of the horn, Bakelite panel nicely engraved; has 4 tubes, 4 spares, 2 headphones & battery cables; outstanding 220
Philco 89 cathedral, 6 tube, 4 knobs, very good condition 85
Sentinel 6" portable TV in leatherette case, very good but two knobs missing 90
Philco 37-610 wood table model, rounded end, Deco style, 4 knobs, good 55
DeForest loop antenna, good 32.50
Admiral large square table radio w/record changer in top, 1940's model, good.....40
GE GD-600 small wood table w/waterfall front, cabinet very good 25
Philco 52-641 small green plastic portable, min. tubes, battery and AC use, good shape 25
Philco Transitone plastic, red w/gold grille, Model 48-225, good shape 25
Motorola red plastic, holes and burn marks in case 25

(Ray Chase, 1350 Marlborough Ave., Plainfield, NJ 07060)

Pioneer Mountain General Auction

Keene, N.H. – Jan. 27, 1990

CONTRIBUTED BY JOHN HAYES

A general auction held at Pioneer Mountain Auction Barn in Keene, N.H., on January 27, 1990, included several radio items. A Fada Catalin, which had been advertised, brought the highest bid.

Atwater Kent Model 44, complete, rusty, f....$30
RCA 100 speaker, f 20
RCA UZ-1325 horn, vg 50
Fada 652, butterscotch Catalin, bottom cracked and felt covered, otherwise good.....462.50
Lyric S-7 cathedral, knobs missing, f 110

(John Hayes, 27 Highland Dr., Henniker, NH 03242)

LETTERS – EARLY PIONEERS

Dear Editor,

In your "Editor's Comments" [Jan. 1990, page 3], you made reference to the thinning of the ranks of those who were there in the early radio era, and urged us to do something to preserve their recollections. However, you did not elaborate on what to do with the written or recorded information of this senior group of radio men. What are your suggestions?

Robert D. Burleson, Philadelphia, Pa.

I have received several letters in response to my comments; my suggestions are threefold:

1. If the information is significant and lengthy, a book may be a possibility. The New England Wireless and Steam Museum has just published an excellent compilation of Thorn Mayes' papers on early wireless (see ad in this issue).

2. Shorter items can be submitted as an article to A.R.C. or another publication. Magazines are always looking for interesting items for their pages, and have the editing skills to turn the remarks into finished articles.

3. Information, written or on tape, can be "archived" by selling or giving it to a private collector or museum.

(Editor)

RESTORATION TOPICS

Restoration Pitfalls to Avoid – Part I

BY RICHARD C. FOSTER

Richard C. Foster is a professional woodworker who specializes in the restoration of antique radios. He has written many articles in A.R.C. and elsewhere on the proper procedures of rebuilding and refinishing wooden radio cabinets and also repairing the electronic components.

Richard is also knowledgeable in identifying, collecting and restoring Philco receivers. Many collectors have called upon his services, and his expertise is widely known.

This is published to assist the collector in obtaining better results when restoring antique radio equipment to its original condition.

Listed here are a number of pitfalls to avoid in restorations that everyone has seen at some time or another:

1. Do not clean tubes with a damp cloth. This can remove the tube numbers. My boxes are full of tubes without numbers. Did you know that 0000 steel wool used carefully will clean tubes perfectly? If you go over the number very lightly, it will barely affect it.

2. Do not buff the gold finish from Grebe Synchrophase escutcheons. This leaves them too "brassy-looking" and non-original.

3. Do not buff the gold finish from AK labels and the decorative buttons on sets like the AK Models 20 and 35. The experienced collector can spot this effect instantly. The original plating was thinly applied and difficult to duplicate.

4. Do not use a crocus cloth to revive dirty nameplates. This may brighten them but leaves them unrestorable because of scratches.

5. Do not fail to use a wood filler before cabinet finishing. Omitting this step results in a rough final finish, unlike that of the original.

6. Do not remove and discard parts (like filter condensers) that leave gaping holes in the chassis. The defective parts can be cut out of the circuit wiring and left in place to retain the original look. Modern replacements can be wired in place, out of sight under the chassis.

7. Do not clean celluloid dials with a wet cloth. This can often bring disastrous results, as the lettering can easily wash away. It seems that Philco dials are especially prone to this.

8. Do not buff the bronze finish from the dial plate or escutcheon on a 30's set. This usually leaves the metal design less pronounced, and again, brassy-looking.

9. Do not oil or wax a Bakelite panel with a brushed finish, such as an early Crosley or a Leutz, to jazz it up. These were originally sold without a glossy finish.

10. Do not use those modern self-adhesive square rubber feet to replace the missing or broken originals. These are not proper design, and they tend to stick to shelves and other radios.

11. Do not make sets too new without regard to old finishes on chassis, dials or cabinets. The restorer should do some research first to see what the set looked like in its original finish.

12. Do not strip and then brush on a polyurethane or Tung oil finish. Polyurethane is difficult to remove. Try to use the manufacturer's original choice of finish.

13. Do not use black paint to replace the very dark tinted lacquer along bases and around openings. Paint just cannot duplicate the delicate affects of lacquer.

14. Do not use vinyl zip power cord when reproduction cloth-covered cord is available. This is evidence of a poor restoration and one of the first to be noticed.

15. Do not use dishwashing liquid or cleaners on knobs. They etch the plasticizer from Bakelite, leaving the finish dulled on many kinds of knobs. Try mild hand soap and lukewarm water and a soft brush. Five minutes of soaking and all the grime will come right off.

16. Do not take a set apart totally. New solder and its method of application are telltale signs of a recent repair job. Try to work around these tricky areas.

17. Do not use a white lacquer stick alone to fill in dials. Tone down the pure white color to keep the antique appearance.

18. Do not use a wire wheel or steel wool to clean nickel-plated parts, or for the sanding of screw-heads. This always brings out the brass along the edges. You also risk bending them when they escape and fly across the room. TSP (from the paint store) is a remarkable metal cleaner with good results. Some metal-cleaning recipes are available in Guy Biraud's book *Restoration and Preservation of Scientific Apparatus for Collectors.*

19. Do not unnecessarily rewire a DC set. With the inexpensive solid state devices that are available today, you can operate a DC set and keep it looking original.

I'd love to publish your favorite restoration hint. Send them to me at my address below, and I'll compile them for future articles. I won't tell you how many of these pitfalls I have fallen into, but one thing is sure; sets that have not had these things happen to them are more likely to increase in value.

To be continued....

(Richard C. Foster, 12 Shawmut Ave., Cochituate, MA 01778)

MUSEUM MUSINGS

DuMont Duoscope TV – Help Wanted

BY MATTHEW GELLER

"Television Apparatus," a major exhibition about the history of the television set, opens at the New Museum of Contemporary Art in New York City in September 1990. (For a detailed description, see *Museum Musings*, A.R.C., February 1990, page 15.)

The museum has requested assistance in displaying items relative to the history of television. A number of people have already responded to the A.R.C. article with offers to lend an assortment of equipment for the exhibition. One such request concerns the display of a unique DuMont Duoscopic television receiver.

The Duoscope allows two people to simultaneously watch different television shows on the same TV. Each viewer has to wear polarized glasses, as shown in Figure 1, (or look through a polarized screen as shown in Figure 2) and use separate earphones. The Duoscopic, made in 1950, would not have been designed if there wasn't a real concern that the TV set would cause family conflict or were it conceivable that a family might own more than one set.

If you know anyone who might be able to build a working Duoscope or a simulation, please contact Matthew Geller at the address below.

The museum has also requested photographs, drawings and stories pertaining to early television for a museum exhibition catalog.

Please send any of the following to be considered for publication in the exhibition catalog:

Black & white photographs of people watching television at home (you are welcome to send old or new pictures of your family watching TV).

Photographs, drawings or diagrams of unusual, unique or imaginative television set installations in the home. Please include any information you have about the drawing or photograph; photographer's, artist's or engineer's name, date, location, manufacturer & model number of the TV set in the picture, etc.

Short fictional stories about the TV set or watching TV. If it is an original story you have written, please include: title, author, date and any previous publication information. If it is a story you have read, include: title, author, and the name and date of the newspaper, magazine or book where it was published.

All materials will be returned (please help us out by including a label with your name and address). Sending us original photographs, drawings or stories constitutes permission to publish them.

Mail to:

Matthew Geller, Television Apparatus Guest Curator, 4 White St., New York, NY 10013-2443. Tel. (212) 925-1247.

(Special thanks to Nat Pendleton of the Smithsonian for his information on the DuMont Duoscopic).

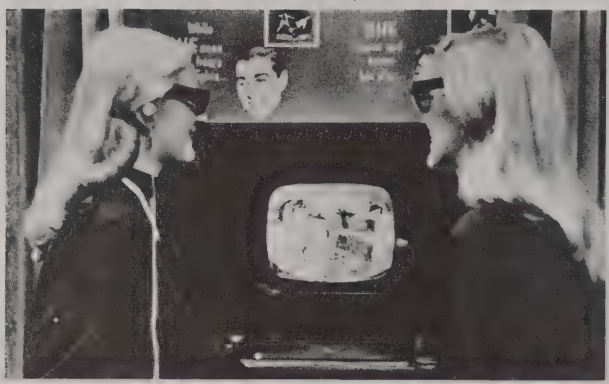


Figure 1. Twins wearing polarized glasses and separate hearing devices, watching different television programs on the same screen.

Figure 2. Two family members watch different programs on the same television screen by looking through polarized screens.

CLUB SPOTLIGHT

New England Antique Radio Club – NEARC

In June of 1988, three members started what has become the New England Antique Radio Club (NEARC). From that start, the club has rapidly grown from the New England Radio Club (the club's original name) to an organization of over 300 members. Membership encompasses all six New England states, eleven states countrywide, and Canada.

The club is dedicated to the collection, restoration, preservation and enjoyment of antique and collectible radios, TVs and related items. Members' collections run the entire gamut of radio collection – from the earliest crystal sets all the way to the novelty transistors of today and everything in between. Many members are highly skilled in radio repair and restoration while others are just beginning to learn the excitement of restoring a worn-out set. Still others collect purely for the aesthetic value of the cabinets alone. NEARC welcomes all new members – from the retired radio repairman to the beginning collector.

The club publishes a quarterly twenty-page newsletter – the *Escutcheon*. The illustrated newsletter regularly features articles of interest, member spotlights, classified ads free to members, letters to the editor, restoration notes, swap meet reports, reprints of articles from other newsletters and radio magazines, and many pictures of swap meet happenings. The editors welcome radio and TV related articles. Back issues of the *Escutcheon* are $1.45 per issue postpaid.

Attendance generally tops 400 at the club's quarterly Swap & Sell Meets. Held in January, April, July and October at the Resurrection Center, 449 Broad St., Nashua, N. H. (Exit 6 from Rt. 3), these meets feature over 70 tables of antique and collectible radios, TVs, parts, books, magazines and related equipment for sale or trade. Table space is available to club members only by advance reservation. The meets also include seminars, old equipment contests, 50/50 raffles and occasional auctions. The Resurrection Center offers plentiful space for buyers and sellers, free parking, a catering service, wheelchair access, and easy accessibility from major highways.

The club sells T-shirts and golf shirts with the club logo.

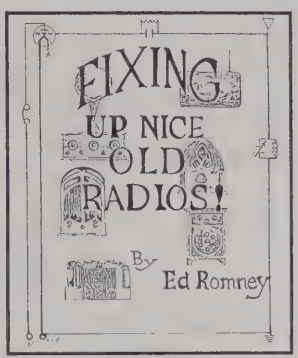
Coming Soon... Fixing Up Nice Old Radios

The definitive antique radio repair book

- Covers everything from crystal sets to the Scott 800-B
- Easy to understand. No higher math. All terms explained. Fix most radios with a $20 multimeter! Adapt an old Hallicrafters for a signal generator!
- Uses actual photos of the insides of your favorite radios, some as big as 8x10. Covers actual repair jobs in detail. Many schematics. Your favorite radios are in it. AK, Zenith, Bosch, Scott, National, Hallicrafters, Crosley 50, Radiola III, 17, 25, R28-p, Philco and many others. Thousands of dollars worth of radios were tested, fixed and photographed for this book.
- For the advanced worker, too. Explains Wunderlich AVC, crystal filters, Scott and Zenith push buttons and bandswitches. Shows how to align old radios with a digital scanning receiver and look at RF waveforms of autodyne detectors with a dual trace scope.



- Writen by Ed Romney, former Mass Radio instructor, broadcast engineer and experienced techinical writer. Professionally typeset and printed.

Only $19 — Coming soon — Look for announcements...
Romney Publishing, Box 96, Emlenton, PA 16373

WANTED: Gonset car radio shortwave converter in useable condition. Ciro DeGennaro, R. 1, Box 64, Feura Bush, NY 12067. (518) 768-2922

FOR SALE: Want to operate that neat old Trans-Oceanic or other suitcase portable without being tied to a line cord? Just install a Porta-Power converter. You'll be surprised how good that radio will sound. Those were good sets. Porta-Power works on any radio with 1.4-volt tubes. It fits in the battery compartment with six D cells supplying all the power the radio needs. You can even use it in more than one set. Works on farm radios too. Order the CVA-1 for sets requiring a 1.5v A battery and the CVA-9 for all others. Either type, including battery holders is only $89.95 plus $3.50 UPS. Guaranteed. What are you waiting for? Order from: Peter Yanczer, 835 Bricken, St. Louis, MO 63122

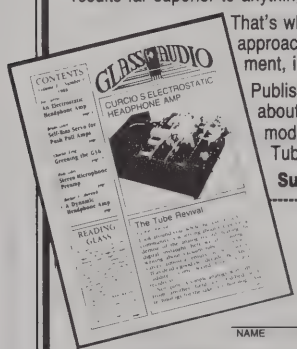
You heard it right.

The newest audio magazine is all about vacuum tubes!

Glass Audio features the best vacuum tube designs for audio reproduction—past and contemporary. The new designs take advantage of improved components and control techniques that make the end results far superior to anything possible during the early days of audio's rebirth after World War II.



That's why tubes are having such a renaissance of interest as a perfectionist approach to good sound. And that's why tubes are reappearing in original equipment, in high end consumer and professional audio systems.

Published twice a year, in June and December, *Glass Audio* will inform you about new innovations in the field and about parts sources. We'll also include modification projects, reviews of technical basics and regular columns such as Tube Troubles, Tube Tips and much more.

Subscribe today!

WANTED: Tone arm with head for phonograph used in 1928 RCA Model 7-26 electric radio with electric phonograph. The head has a small tag on the back side that reads, "supplied to Victor Talking Machine Co. by Radio Corp. of America." Also would someone have the pewter tuning gears for a Bremer Tully Counterphase 7-tube TRF radio. Also I have a Crescentyne 6-tube TRF radio, that needs some work. Does anyone have any service information on these? Arnold G. Schmidt, Rt. 5, Box 59, Jamestown, ND 58401. (701) 252-5291

WANTED: WW2 military transceiver BC-659 or BC-620. E. A. Conover, 42 Comanche Dr., Oceanport, NJ 07757

WIRELESS COMMUNICATION IN THE UNITED STATES

The Early Development of American Radio Operating Companies

BY THORN L. MAYES, W6AX
240 Pages – 160 Illustrations

The glory days of high powered wireless, 300,000 watt spark transmitters, 1,000,000 watt arc transmitters and mighty Alexanderson alternators with antennas as long as nine miles.

Factual accounts of alternators, arcs and sparks, and of coherers, barretters and tikkers!

Unscrupulous stock promotions that by chance yielded technical breakthroughs.

Excerpts from unpublished letters of pioneers and early drawings of quenched gap spark transmitters.

Prepared for publication by Westinghouse engineer, Arthur C. Goodnow, W1DM.

Softcover – Expected shipping date: Dec. 31, 1989

CLASSIFIED ADVERTISING POLICY

ONE FREE 20-WORD AD for subscribers in each issue; additional words are 10¢ each. See details below. All classified ads must be received (not just postmarked!) by the ad deadline. Late ads are held for the following issue. Please enclose correct payment with all ads. Stamps or cash are OK for small amounts. (Canadian and other foreign advertisers, please see "Payment" on page two for methods.) "Free words" cannot be accumulated from month to month; free words must be requested when ad is submitted.

Please write each ad on a separate sheet of paper, especially when included with other A.R.C. correspondence. Include SUB# with ad. Ads may be sent in advance; but, write each ad on a separate piece of paper and indicate the month (or successive two months) you want the ad to run.

Please write legibly and use both capital and small letters. Do not use dashes between words. Some numbers and letters can look alike, for example 1, l and I (the number one, the capital i and the small L.) Write the following characters clearly (especially in model numbers): 1, l and I; 0, O , o, Q and D; r and n; 6, b and G; V, U, u, v and Y; A and R; 5, S and s; 2, Z and z. We try to correct spelling errors, so when using an uncommon word or manufacturer which looks similar to a common word or manufacturer, note it so that we do not "correct" it. Editor's comments are in [brackets].

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be identified as such. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisified.

Publisher reserves the right to edit ads without notification to the advertiser and to reject ads for any reason. Publisher is not responsible for errors due to illegibly written ads or for any other reason. Since club activities receive free advertising on the *Coming Radio Events* page, the free 20 words may not be used for club activity ads. See inside front cover for additional information.

CLASSIFIED AD DETAILS

Deadline: 10th of the month!

Classified ads must have a standard heading such as WANTED, FOR SALE, FOR TRADE, FOR SALE/TRADE, SERVICES, MESSAGE, HELP, etc. This heading is the only bold or all-capitalized words allowed in the ad. Capitalize only manufacturer names, model names, etc. Wanted and For Sale ads are mixed together to encourage the reading of all ads, including the Wanted ads. This standard ad format makes scanning the ads easier.

Before writing your ad, please look over the ads in a recent issue of A.R.C., and try to write your ad in the same style. Full name and address is required in all classified ads; we will add it if you forget.

To encourage varied content of the ads, **multiple insertions of the same classified ad are limited to two successive months.** (To run an ad longer, use a boxed classified or display ad.)

Classified Ad Rates per Month

Subscribers:
- First 20 words: **FREE***
- 10¢ per word for extra words over 20 **plus**
- 10¢ per word for a shaded ad (count all words including free words).
- * Subscribers may take 20 free words on only one ad each month.

Non-Subscribers:
- 20¢ per word **plus**
- 10¢ per word for shaded ad.

Please do not forget to send in the extra 10¢ per word when your classified ad runs over the free 20 words; your payment will be appreciated, and it will help to keep A.R.C. healthy.

BOXED CLASSIFIED AD DETAILS

Deadline: 5th of the month!

Boxed classified ads can run unchanged for three months or more. No words are free. Ads may be shaded and may include bold and all-capitalized words freely. The ad need not begin with For Sale, etc.

Minimum run is 3 months, prepaid.

Boxed Classified Ad Rates per Month

Nonshaded ads:
- 16¢ per word for all words,* none free, **plus**
- 10¢ per word for each bold word **plus**
- 10¢ per word for each all-caps word.

Shaded Ads:
- 26¢ per word for all words* **plus**
- 10¢ per word for each all-caps word.
- Note: All words in shaded ads are bold.

Non-Subscribers:
- Add 15¢ per word to above costs.

*Three of the total words can be bold-all-caps at no extra charge.

PHOTO & DRAWING DETAILS

Deadline for classified and boxed classified ads with drawings or photos: 5th of the month.

Drawings and photos are encouraged as the response to your ad is much larger and the reader knows better what you want or are selling. Send in your drawing or photograph, and A.R.C. will reduce it or enlarge it as needed.

Photo and Drawing Rates per Month

$6.00 per month for each photo or drawing

IMPORTANT — COUNTING WORDS — IMPORTANT

The **standard headings**: WANTED, FOR SALE, etc., count as **one word** each time used in an ad. **Name, address** and (one) **telephone number**, count as **6 words**, regardless of length. Ham call letters and business name can be included in the 6 words and do not count extra. Full name and address is required in all classified ads – it does not cost extra! Each additional word, abbreviation, model number or number group, extra telephone numbers, etc. count as one word. Hyphenated words count as two words.
